
AKUATEMP

Refrigerant and antifreeze

New formulation and long-term refrigerant and antifreeze with corrosion inhibitors. Specially indicated for his use, previously diluted, in all types of cooling systems and specially in those where exist aluminium elements and alloys.

Properties

- A completely organic formula.
- Free of nitrites and amines.
- Does not contain silicates, phosphates, borates or benzoates.
- Low risk for persons and more respectful with the environment.
- Allows to lower the freezing point and increase the flash point
- Do not foam.
- A high capacity to transmit the heat excess to the atmosphere.
- Protects pumps and the cooling system from corrosion.
- It is degraded more slowly than the conventional antifreeze-refrigerants, which makes notably his life longer.

User Instructions

It is recommended to keep it in his original packaging.

Dilute previously with distillate or deionized water. Use the most appropriate concentration according to the protecting freezing point desired. It is recommended to use it in a concentration not less than 20%, and preferably 40% (freezing temperature: -25ºC).

Although it is miscible and compatible with most of antifreeze-refrigerants in the market, it is advisable not to mix it, because his good anticorrosive properties can be loosed.
