

AKUATENSOR

Automatic blanket & roller wash systems water additive.

A water based additive that improves the physical-chemical properties of the water used to optimize the cleaning of blankets and ink rolls batteries. Valid when printing with any type of ink.

Properties

- Improves the rubber surfaces cleaning.
- Keeps the auto. wash system clean and free from bad smells.
- Prevents against calcareous scaling in the auto. wash system and calcium accumulation on rubber surfaces.
- It is corrosion inhibited.
- Valid for use both manually and automatically.
- It is NON VOC.
- Fully water miscible.
- Excellent compatibility with blankets and rollers.

User's Instructions

Add 5% of Akuatensor in the water deposit of the automatic wash system. In case of printing substrates subject to generate plenty paper dust, or improve the cleaning effect of calcium accumulation on rollers and blankets, the doses can be increased to 10%.

NOTE : In any case, the effectiveness of the rollers and blankets calcium accumulation prevention is directly linked to the wash-ups frequency (the more the better effect).
