PRODUCTOS PARA ARTES GRAFICAS

NEUTRALIZANTE

A buffered aqueous solution with a strong biocide action, which sterilizes in depth the fount solution circuits. Its use is recommended after accomplishing a complete circuits cleaning with the BECA GRAFIC LIMPIADOR DE CIRCUITOS.

Properties

- It is a concentrated aqueous product.
- It is to be diluted in Water at a proportion of 1+3 .
- It has a slightly acidic characteristic.
- It has a strong sterilizing action.
- It neutralizes the alkaline residues left by the circuits cleaner .
- After a final rinse with water, the circuits are ready for the fount solution installation .

Users Instructions

1st) Dilute it at a proportion of : 1 Ltr. Neutralizante in 3 Ltrs. of Water.

2nd) Install the emulsion in the circuits and allow it to recirculate at least for 1 x full Hour .

For highly contaminated circuits it is recommended recirculating it during 3 to 4 Hours, in order for its strong biocide sterilizing capacity to be used in full.

3rd) To finalize, flush the circuits with plain Water for its elimination .
